The prognostication of native's longevity is no doubt a hard task on the part of an astrologer. The lagna lord is considered as house of longevity, whereas the lords of 6th 8th and 12th houses are detrimental to the native. Sani is the significator of 6th, 8th & 12th houses. It is known as lord of death.

The 1st lord and Ravi are significators of long life. If the position of Ravi, lagna and lagna lord are sound in a birth chart, the native enjoys longer life, the subject to non-interference of malefic planets there on. The natural

Rasi Gunakaraka

Each sign has been assigned a fixed or constant number for all charts.

Mesha	7	Tula	7
Vrisha	10	Vrischika	8
Mithuna	8	Dhanus	9
Karka	4	Makara	5
Simha	10	Kumbha	11
Kanya	5	Meena	12

The bindus after two reductions (Ekadhipatya and Tikona sodhana), in all 12 signs, should be multiplied by the above mentioned constant numbers. Next, we have to add all the products. This is to be done for all seven planets.

Rasi Gunakaraka			Bindus	Products
Constant				
Mesha	7	*	4	28
Vrisha	10	*	0	0
Mithuna	8	*	0	0
Karka	4	*	2	8
Simha	10	*	3	30

Dhanus	9	*	0	0
Makara	5	*	0	0
Kumabha	11	*	1	11
Meena	12	*	3	36

127

Like every Rasi, each planet also is assigned with a constant number which is called Grahagunkaraka.(multiplier). These should be multiplied by the figures (after two reductions) in the signs occupied by the various planets. All the products are to be added.

The total product of 12 Rasis is called Rasi Pinda and total product of seven planets is called Graha Pinda. To get Sodhyapinda these two are to be added.

Ravi's Sodhyapinda is $127+40=167$. We have to multiply this by 7 and divide by 27. ($167*7/27=43.3$).

The quotient is the years given by Ravi as longevity. If the quotient is greater than 27, it must be reduced by 27. Here 43.3 exceeds 27. So $43.3-27=16.3$ Years contributed by Ravi.

Planets	RasiPinda		Grahapinda		Sodhyapinda	Years
Ravi	127	+	40	=	167	43.3
Chadra	141	+	75	=	216	56
Kuja	62	+	20	=	82	21.3
Budha	140	+	54	=	194	50.3

Guru	89	+	107	=	196	50.8
Sukra	54	+	15	=	69	17.9
Sani	80	+	75	=	155	40.2

Except Kuja and Sukra, the years given by other planets are exceeding 27. So they have to be reduced.

Planets	Years				
Ravi	43.3	-	27	=	16.3
Chandra	56	-	27		2
Kuja	21.3				21.3
Budha	50.3	-	27		23.3
Guru	50.8	-	27		23.81
Sukra	17.9				17.9
Sani	40.2	-	27		13.2

118 Years

These years need some haranas (reductions).

1. If there are more than planet in a rasi, then the years to be reduced by one half.
2. If a planet is Neecha or asthangata then also the years to be reduced by one half.
3. The years given by a planet in enemy's camp is reduced by one third.
4. If a planet is in the visible half reduce its portion

Malefic Planets

12 th house	0
11	$\frac{1}{2}$
12	$\frac{1}{3}$
9	$\frac{1}{4}$
8	$\frac{1}{5}$
7	$\frac{1}{6}$

The benefic will lose half of what a malefic does.

5. If a planet which is defeated in grahayuddha one third must be deduced.
6. The years given by eclipsed Ravi and Chandra reduced to one third.

When same planet is subject to a number of reductions, only the highest reduction should be applied.

Ravi	16.3	8.15
Chandra	2	2
Kuja	21.3	10.6
Budha	23.3	11.6
Guru	23.8	20.8
Sukra	17.9	14.9
Sani	13.2	6.59
	118	74.8

The longevity years given by various planets is 74.80 Years.
This above calculation is based on Binnashtakavarga.

Second Method

Another method is based on Sarvashtakavarga. It is also called Nakshtrayus. As before, here also, at first sodhyapinda is to be found based on Sarvashtakavarga bindus (after two reductions).

	guna		bindu	
Mesha	7	*	13	91
Vrisha	10	*	3	30
Mithuna	8	*	9	72

Rasi Pinda		698

$$1079 * 7/27 = 280$$

Remove hundreds

$$280 - 200 = 80$$

$$\text{years} \quad 80 * 324 / 365 = 71 \text{ years}$$

By the first method we got 74.80 years longevity whereas in this second method (based on sarvashtaka varga) we got 71 years.

The third method

In the third method, the sodhyapindas of each planet (including Rahu) and Lagna should be multiplied by the bindus in 8th house in their respective astakvarga (before two reductions) and then divided by 27. For soura mana years the product is to be multiplied by 324 and divided by 365.
